Available immediately for remote opportunities from Tunisia and open to international relocation with employer sponsorship or by agreement.

Professional Summary

Platform and Infrastructure Engineer with 6+ years of hands-on experience across cloud infrastructure, DevOps, production reliability, Kubernetes, observability, automation and database operations. Nearly four years of production ownership at an international marketplace, serving as the functional platform/infrastructure lead and principal escalation point across application, database, networking, edge and real-time communication boundaries. Combines evidence-led change control, rollback and recovery discipline with applied technical education.

Core Expertise

- Platform engineering, production reliability, incident diagnosis and capacity planning
- Linux/Ubuntu, Nginx, Phusion Passenger, Ruby on Rails production operations
- PostgreSQL performance/storage/connections/backup/recovery; Redis
- New Relic, Grafana, OpenSearch, monitoring, alerting and operational reporting
- Cloudflare, DNS, TLS, access controls, crawler trust and edge operations
- Docker; Jitsi/Jibri/JVB/Jicofo/Prosody real-time infrastructure
- AWS, ECS, EC2, Lambda, EKS/Kubernetes, Helm, Jenkins, CI/CD, Elastic Stack and Amazon OpenSearch
- Validation, rollback, recovery, technical documentation, risk communication and mentoring

Professional Experience

Apprentus — DevOps Engineer | Functional Platform & Infrastructure Lead

July 2022 – July 2026

- Held functional technical leadership and production ownership for a high-traffic international marketplace, acting as principal escalation across Linux, Nginx/Passenger, Rails behavior, PostgreSQL, Redis, monitoring, Cloudflare/DNS/TLS, security controls, Docker services and real-time meeting infrastructure.
- Contributed to production PostgreSQL optimization that reduced database storage from 199 GiB to 133 GiB, reclaiming 66 GiB (approximately 33%).
- Delivered and validated a Jitsi/Jibri modernization with five parallel recording workers, distinct worker assignment, successful object-storage export and idempotent reruns.
- Authored a read-only infrastructure version-audit and evidence pipeline with raw/sanitized outputs, structured inventory, share-safe reporting and explicit command-safety controls.
- Coordinated production changes with backend, frontend, QA, product and operational stakeholders; prepared validation, rollback and recovery procedures; supervised and mentored a DevOps intern for approximately six months without claiming formal HR people management.

UBIAI — Cloud & DevOps Engineer

Remote, USA-based | March 2021 – June 2022

- Designed and supported AWS infrastructure across ECS, EC2 and Lambda-based workloads.
- Investigated memory consumption and application bottlenecks and proposed practical performance and scalability improvements.
- Built and improved CI/CD workflows supporting more consistent software delivery.
- Strengthened infrastructure observability using CloudWatch, Prometheus and Grafana.
- Developed metric-driven scaling and resource-optimization recommendations to improve platform reliability and efficiency.

iPrécision — Cloud & DevOps Engineer

Tunis, Tunisia | January 2020 – February 2021

- Designed and deployed an AWS cloud environment using Kubernetes and Amazon EKS.
- Built CI/CD workflows to standardize application build and deployment processes.
- Implemented centralized logging, monitoring and search capabilities using the Elastic Stack and Amazon OpenSearch.
- Introduced auto-scaling, performance monitoring and anomaly-detection mechanisms to improve platform resilience and operational visibility.

D.E.S — Software Developer

Nabeul, Tunisia | January 2019 – July 2019

- Built and maintained a business-management web application supporting inventory, sales and financial workflows.
- Migrated application data and functionality from Microsoft SQL Server to MySQL.
- Automated operational processes and developed dashboards and alerts for improved business visibility.
- Supported application deployment and assisted staff users with adoption of the system.

Technical Teaching

Leaders University Nabeul — Technical Instructor — Cloud, DevOps & Cybersecurity

2025–2026

- Delivered Virtualisation and Cloud instruction to third-year GLSI students and prepared a formal assessment for the 2024–2025 academic term.
- Designed and delivered applied AWS/Linux and Flask/PostgreSQL security labs with repeatable setup, validation, teardown and authorized-use guidance.

Selected Engineering Work

- **Production reliability and infrastructure evidence:** multi-system, read-only auditing; sanitized evidence; PostgreSQL and capacity analysis; operational risk reconciliation.
- **Cloud and security laboratories:** repeatable AWS/Linux and Flask/PostgreSQL environments with validation, teardown and authorized-use guidance.

Education

- National Professional Master's in Big Data, awarded 2 January 2022 — Bien
- National Applied Bachelor's in Computing and Business Administration, specialty Business Computing, awarded 27 July 2019 — Bien

Credentials

- Google Cloud skill badge — Perform Foundational Data, ML, and AI Tasks (2021), independently verifiable
